

SYSTEM AND METHOD FOR MANAGING NETWORK SERVICE ACCESS AND ENROLLMENT

ABSTRACT OF THE DISCLOSURE

5

A system and method for automatically switching network connections to an appropriate network entity based on access rights possessed by a user of a wireless terminal. A switch recognizes the certificate provided by a terminal, and directs the connection to the service provider hosting a targeted secure service if the certificate proves to have the appropriate access rights. The switch directs the connection to an enrollment module if the certificate does not correspond to the service provider's required certificate, where the user can attempt to obtain the appropriate certificate from the enrollment module to ultimately access the targeted secure service.
